

**In the Claims:**

**This version of the claims replaces and supercedes all prior versions of the claims.**

1. – 36. (Cancelled)

37. (Previously Presented) A medical apparatus adapted for use with a capsulated medical apparatus, said capsulated medical device having an imager for obtaining an image, said capsulated medical device transmits a signal of image data to an external reception apparatus that is placed outside of the body, the medical apparatus being placed outside of a body and is different from the external reception apparatus, the medical apparatus comprising:

a communication section capable of at least receiving the image data of the image from the external reception apparatus;

a drive power supply section including a battery for supplying a driving power to at least the communication section; and

a display section for displaying at least the received image data.

38. (Previously Presented) The apparatus according to claim 37, wherein the drive power supply section is further capable of supplying the driving power from an external power supply.

39. (Previously Presented) The apparatus according to claim 38, further comprising a signal processor which processes the image data to display the image.

40. (Previously Presented) The apparatus according to claim 39, wherein the communication section is capable of transmitting data to the external reception apparatus.

41. (New) The apparatus according to claim 38, wherein said external power supply is an AC power supply.

42. (New) The apparatus according to claim 41, wherein the drive power supply section is further adapted to generate direct-current voltage from the AC power supply.

43. (New) The apparatus according to claim 37, wherein the external reception apparatus is adapted to store the image data.
